Meeting 3

Recap
- Shane
  - Started to use android studio and become familiar with the application
    - Application had some bugs that needed to be resolved
- Tim
  - Finished setting up firebase authentication on the platform
  - Need to implement firebase authentication into application
- Josh
  - Worked on the algorithm which passes data to the API and parses through the data
  - Need to make adjustments to the API request so it will return more appropriate data
- David
  - Determined we need a new api since we don't get enough data from previous one
  - Found a new API which gives us more data
- Yiou
  - Designed a logo for the application
  - Need to determine color scheme for the application
- Kamen
  - Found a template
  - Made edits so it is compatible with latest version of Android
  - Need to make structural edits to the template so it matches Yiou's designs
